

ROUGH SURFACE

Counter for Food Preparation

With a Bizzz^{MC} Beeswax Finish

This problem usually occurs when liquid is in contact with the wood for extended periods. This condition may occur with new counters.

Items required to renew your countertop.

Bizzz^{MC} beeswax

Sanding block

Sandpaper

Steel wool

Cloth

Sand the area using a sanding block fitted with 150-grit sandpaper. Stop sanding as soon as the surface feels smooth. Wet the sanded area and allow to dry. Sand again with 180-grit sandpaper. Remove the wood dust with a vacuum cleaner, apply a coat of Bizzz^{MC} beeswax, using 000 steel wool, and polish with a cloth.

We recommend waiting at least three months before restoring the surface of a new counter. The counter must adapt to your environment and work habits. Remember that a countertop with a Bizzz^{MC} beeswax finish is easy to renew, so don't be alarmed by a temporarily rough or stained countertop.

Warning

Never let water stagnate for prolonged periods (for example, overnight) under a rubber mat or cutting board. You should also avoid leaving damp cloths or towels on the counter to dry. Intense heat sources such as very hot pots or non certified cooking appliances (example: "*Zero clearance*" cook top) must be kept away from your counters.
